

Using Google Noto fonts

Overleaf

April 2021

1 Introduction

This example project uses the [noto](#) package to typeset your document using Google's Noto fonts¹:

- `"textbf-bold"` produces **bold**
- `"textit-italic"` produces *italic*
- `"textbf-"textit-bold italic"` produces ***bold italic***
- `"emph-emphasis"` produces *emphasis*
- `"textbf-"emph-bold italic"` produces ***bold italic***

1.1 Monospaced fonts

You can use Noto's monospaced fonts for regular and **bold** monospaced text.

1.2 Sans serif fonts

Here is some text is typeset in a sans serif font together with **text typeset in bold sans serif**.

2 Further reading

Documentation for the noto package can be found in its [readme file on CTAN](#).
